

Naurtech Corporation develops connectivity solutions to provide mobile access to enterprise data and applications using Windows CE platform devices. Our Terminal Emulation and Web Browser products marry the power of device local processing available on handheld computers with the efficiencies of thin client computing to help our customers implement their wireless mobility solutions. As an innovative market leader, our customers rely on our technology to address their unique needs in implementation of their auto-ID data collection (AIDC) solutions. With over eighty thousand deployments worldwide, our terminal emulation and web browser products are used in mobile solutions across market segments like retail, manufacturing, distribution, consumer packaged goods and logistics. Partner with us to satisfy your market requirements by delivering innovative solutions so you too can achieve higher growth and revenues.

Value Proposition to our Partners

Naurtech Corporation has built a strong reputation for providing superior quality, innovative products, backed by responsive customer and partner support. Our products are used by over 850 customers in 21 countries. Our growing list of satisfied customers includes well known names like CarreFour, Target, Food Lion, Intel, Stein Mart, DHL, Coca Cola, Federal Express, Boeing, Siemens and others. Two of the world's top five largest retailers use our products in their production environment. Our continued business success is a direct result of our investment in new technology solutions, product innovation, support of new device platforms and responsive support for our partners.

- We provide device tailored versions of our TE and Web Browser smart clients for complete product families (PDA, keypad handheld, sub-notebook, vehicle mount) from all major hardware vendors. Standardizing on our smart clients allows you to offer a broad choice of hardware terminals in your solutions. We are the only vendor with such a breadth of offering.
- We are the only vendor who supports proprietary protocols and extensions from hardware vendors like Intermec, Symbol (Telxon), LXE and others. This allows you to "unlock" large accounts and position hardware choice to your customers. Furthermore, you can tap into the large "legacy device upgrade" market which may otherwise not be easily possible.
- With our integrated Data Collection Web Browser, users can access GUI rich content for web-based applications, running on a Web server, alongside legacy terminal emulation. Users can control the device and interface with peripherals through their Web applications. This provides your customers a migration path from legacy green screen to newer web based applications. It also allows your customers to future proof their investment.
- With integrated functionality such as Speech Recognition support, Barcode scanner & RFID reader control and SSH for secure mobile connections, our products allow you to deliver solutions that satisfy a broad spectrum of requirements. You will also minimize your training and support costs by standardizing on a single product solution from Naurtech, since its configuration, usability and deployment is uniform across all Windows CE terminals from ANY hardware vendor.
- Almost every data collection solution, whether it is based on green screen terminal emulation or newer web based applications, requires customization. The new Scripting Engine provides a platform for such customizations and a simple platform to automate data collection processes. This allows you to differentiate your solutions from your competitors.
- We recognize, that as a VAR / Integrator, your sales organization requires responsive, knowledgeable support from your technology partners. Such pre and post sales support is one of our biggest business differentiators.

Founded
2001. Privately held.

Headquarters
Issaquah, Washington, USA
(Seattle, WA area)

Expertise
Web Browser and Terminal Emulation for wireless terminals. Barcode, Voice and RFID enabled data collection solutions

Sales
Through a network of reseller partners in North America, EU, Asia Pacific and Latin America

Customers
Includes world's leading retailers, distributors, warehouses, manufacturers and logistics companies

Install Base
100,000+ licenses in 21 countries and growing
